BACKEND STACK
Python, Go, C, C++, C#, Bash, Fish

PROFILE
A software engineer with **12 years of experience throughout Europe** and South Korea with a demonstrated passion for **deployment processes** to provide better builds without compromising quality; as well as pipelines and automation.

Previously a veteran Gameplay Programmer, I successfully transitioned as a System Reliability Engineer in recent years

EXPERIENCE

Tool Programmer and DevOps, Apperture; Paris　　　　**2020–2024**
From prototypes to delivered products, I led projects for "Visiocyt" and "Digital And Humans". I deployed automated process to build iOS applications and delivered it to customers or to QA service for testing.

Software Engineer, iD Systemes; Reims　　　　**2019–2020**
As a member of the R&D team, I developed a wine tank map manager application in WPF/C#. Our main clientele was Moët & Chandom (LVMH). I made the team transition from subversion to git and initiated CI/CD logic in their products.

Software Engineer, Hanyang I&C co., ltd; Seoul　　　　**2017–2019**
I led the car simulator project on Unreal Engine 4 (C++) and the project was used to train automated cars. One of our customers was the Korea Security Agency. I wrote scripts to automate shaders and models imports into Engine.

Gameplay Programmer, Binaree Inc.; Seoul　　　　**2016–2017**
We released a strategy video game built with Unity3D. I configured a Jenkins server to provides automated builds on Android and iOS.

Intern Gameplay Programmer, Joca Loca; Luxembourg　　　　**2014**
We released mobile video games based on Unity3D, millions of downloads on car simulators.

Intern System Administrator, Jamendo; Luxembourg　　　　**2012**
I wrote python scripts and I setup NGINX servers to provide generated pages from cache to users.

EDUCATION
Epitech, Paris & Nancy　　　　**2012–2015**
Keimyung University, Daegu　　　　**2014–2015**
